Executive Summary

# Executive Summary

This report is intended to provide plan level information pertaining to the investment options, asset allocation, historical performance, and fees as of the stated period end date. Below is a guide to the report analytics.

## Asset Allocation

Assets are shown in terms of dollars and as a percent of the total plan

Fund	RPA		TSA		Medical Resident		Total	
	(\$)	(%)	(\$)	(%)	(\$)	(%)	(\$)	(%)
<b>Asset Allocation</b>	<b>\$2,339,144</b>	<b>5.4%</b>	<b>\$732,469</b>	<b>4.4%</b>	<b>\$1,155,429</b>	<b>8.5%</b>	<b>\$4,227,042</b>	<b>5.7%</b>
VALIC Company I Conservative Growth	\$0	0.0%	\$558	0.0%	\$20,947	0.2%	\$21,506	0.0%

## Performance

Where available, each individual investment option is also measured against its peers and given a rank. Lower numbered ranks signify superior performance.

Trailing performance takes an entire time period's return (e.g., the last 5 yrs.) and turns that return into an average annual return that the investment option received over those last five years (e.g., an average return of 15.1% per year for the last five years).

Each investment option return includes its benchmark immediately beneath it for comparative purposes.

Disclaimers and Notes

# Notes

- The rates of return contained in this report are shown on an after-fees basis unless otherwise noted. They are geometric and time-weighted. Returns for periods longer than one year are annualized.
- Universe percentiles are based upon an ordering system in which 1 is the best ranking and 100 is the worst ranking.
- Due to rounding throughout the report, percentage totals displayed may not sum to 100%. Additionally, individual fund totals in dollar terms may not sum to the plan total.

# TIAA Traditional Additional Notes

TIAA Traditional is a uniquely-structured fixed rate annuity contract in which participants earn a personalized rate of return based on their individual cash flow experience. This product can act as both a capital preservation option during a participant's savings phase and as an optional immediate income annuity during the spending phase.

The performance within TIAA Traditional is determined in 2 key ways:

- On a monthly basis, a new money crediting rate is issued by TIAA
- On an annual basis, contributions are grouped together based on timing and TIAA declares new crediting rates for these groups of “vintage” contributions

The resulting performance is a dollar-weighted average of the returns being earned by a participant's contributions, simultaneously, over time. As such, the performance in this report is illustrative of the aggregate performance of TIAA Traditional investors and does not reflect any one participant- or even plan-level experience in the product.

For participants that are interested in converting all or some of their TIAA Traditional balance into lifetime income at retirement, there are contractual minimum annuitization rates associated with the product. That said, participants who are invested in TIAA Traditional for longer periods also earn a “loyalty bonus,” where the monthly benefit is higher than that of an annuitant who transfers the same account balance into the product at the point-of-retirement.

Plan fiduciaries do not have control over assets in TIAA's Retirement Annuity (RA), Group Retirement Annuity (GRA), Supplemental Retirement Annuity (SRA), or Group Supplemental Retirement Annuity (GSRA) annuity contracts. This is due to the individual nature of these annuity contracts. Balances in these contracts are under participant control.
